

Partial Contents of *Software State-of-the-Art*

Part I: Management

Overstructured Management of Software Engineering
Gerald M. Weinberg

No Silver Bullet: Essence and Accidents of Software Engineering
Frederick P. Brooks, Jr.

Understanding and Controlling Software Costs
Barry W. Boehm and Philip N. Papaccio

Characterizing the Software Process: A Maturity Framework
Watts S. Humphrey

The Computer Software Industry in Japan
Denji Tajima and Tomoo Matsubara

The Information Archipelago—Maps and Bridges
James L. McKenney and F. Warren McFarlan

The Dynamics of Software Project Staffing: A System Dynamics Based Simulation Approach
Tarek K. Abdel-Hamid

Reflections on Software Research
Dennis M. Ritchie

Part II: Measurement

A Meta-Model for Software Development Resource Expenditures
John W. Bailey and Victor R. Basili

Function Point Analysis: Difficulties and Improvements
Charles R. Symons

A Model for Estimating Program Size and Its Evaluation
Minoru Itakura and Akio Takayanagi

Demographic and Technical Trends in the Computing Industry
T. Capers Jones

Part III: Methods

A Software Development Environment for Improving Productivity
Barry W. Boehm, Maria H. Penedo, E. Don Stuckle, Robert D. Williams, and Arthur B. Pyster

Box Structured Information Systems
H.D. Mills, R.C. Linger, and A.R. Hevner

Cleanroom Software Development: An Empirical Evaluation
Richard W. Selby, Victor R. Basili, and F. Terry Baker

Practical Priorities in System Testing
Nathan H. Petschenik

Software-ICs: A Plan for Building Reusable Software Components
Lamar Ledbetter and Brad Cox

Frame-Based Software Engineering
Paul G. Bassett

Software Engineering with Reusable Designs and Code
Robert G. Lanergan and Charles A. Grasso

STATEMATE: A Working Environment for the Development of Complex Reactive Systems
D. Harel, H. Lachover, A. Naamad, A. Pnueli, M. Politi, R. Sherman, and A. Shtul-Trauring

Modula-2—A Solution to Pascal's Problems
Roger T. Sumner and R.E. Gleaves

A Rational Design Process: How and Why to Fake it
David Lorge Parnas and Paul C. Clements

Part IV: News From Left Field

Self-Assessment Procedure IX
Eric A. Weiss, editor, and Donn B. Parker

IBM's Santa Teresa Laboratory—Architectural Design for Program Development
Gerald M. McCue

Composing Letters with a Simulated Listening Typewriter
John D. Gould, John Conti, and Todd Hovanyecz

Ray Tracing Jell-O Brand Gelatin
Paul S. Heckbert

Fifteen Years of Psychology in Software Engineering: Individual Differences and Cognitive Science
Bill Curtis

Breakdowns and Processes During the Early Activities of Software Design by Professionals
Ramonde Guindon, Herb Krasner, and Bill Curtis

The Real Ada, Countess of Lovelace
Carol L. James and Duncan E. Morrill

The Errors of T_EX
Donald E. Knuth

WINNER OF
COMPUTER BOOK REVIEW'S
MAEVENTEC AWARD 1991 FOR
"books which are exemplary in
style, content, and format."

Software State-of-the-Art

Selected Papers

edited by Tom DeMarco and
Timothy Lister

ISBN: 978-0-932633-14-9
©1990 584 pages hardcover
\$51.95 (includes \$6 UPS in US)

*A Decade's Worth of Classic Papers—
Collected into a Single Volume*

In one convenient collection, *Peopleware* authors Tom DeMarco and Timothy Lister present a decade's worth of papers that changed the history of software development. Published in 1990, this collection represents some of the best writing from some of the biggest names in the industry: Frederick P. Brooks, Gerald M. Weinberg, Watts S. Humphrey, T. Capers Jones, Barry W. Boehm, Bill Curtis, Donald E. Knuth, Victor R. Basili, Brad Cox, Harlan Mills, and many more.

The papers were selected from more than a dozen sources, including *IEEE Computer*, *Software—Practice & Experience*, *IEEE Transactions on Software Engineering*, and *Communications of the ACM*.

"This is what it must be like to dine with a celebrated gourmet and have your meal ordered for you. . . . there is something here for everyone. Kudos to DeMarco and Lister for orchestrating a valuable and relevant collection."

—Robert Wray, *CASE Trends*

". . . a must read since it contains many of the original works that defined the growth of software engineering in the last decade."

—Warren Keuffel
Computer Language

"Everyone will have his or her own favorite in this list (mine is Brooks's 'No Silver Bullet' paper). . . . there will be quite a few that you have been meaning to read but have been unable to find. Now you have no excuse . . . buy this book. . . ."

—Ed Yourdon
American Programmer
